JOURNAL OF GEOPHYSICAL RESEARCH

Space Physics

AN AGU JOURNAL

Aims and Scope. *JGR: Space Physics* covers aeronomy and magnetospheric physics, planetary atmospheres and magnetospheres, interplanetary and external solar physics, cosmic rays, and heliospheric physics.

Editors: Michael Liemohn (Editor-in-Chief) (liemohn@umich.edu, http://orcid.org/0000-0002-7039-2631), Michael Balikhin, Larry Kepko, Alan Rodger, Yuming Wang.

Associate Editors: Anton Artemyev, Matthew Fillingim, Bernd Funke, Natalia Ganushkina, Qiang Hu, Martin Kaufmann, Olga Khabarova, Xing Li, Merav Opher, Joachim Raeder, David Shklyar.

AGU Editorial Team. For assistance with submitted manuscripts, file specifications, or AGU publication policy please contact jgr-spacephysics@agu.org.

For submission instructions or to submit a manuscript visit: http://jgr-spacephysics-submit.agu.org.

The journal to which you are submitting your manuscript employs a plagiarism detection system. By submitting your manuscript to this journal you accept that your manuscript may be screened for plagiarism against previously published works.

JGR: Space Physics accepts articles for Open Access publication. Please visit http://olabout.wiley.com/WileyCDA/Section/id-406241.html for further information about OnlineOpen.

Publication Charges. The publication charge income received for *JGR: Space Physics* helps support rapid publication, allows more articles per volume, makes possible the low subscription rates, and supports many of AGU's scientific and outreach activities. Publication charge information can be found here: http://publications.agu.org/author-resource-center/publication-fees.

To encourage papers to be written in a concise fashion, there is an excess length fee. For *JGR: Space Physics* the fee is assessed only on the equivalent of more than 25 publication units. The excess length fee does not apply to review articles, and the editor may waive the fee on a limited number of concisely written papers that merit being longer. There is no charge for color in any format.

Copyright and Copying. Copyright © 2015. American Geophysical Union. All rights reserved. No part of this publication may be reproduced, stored or transmitted in any form or by any means without the prior permission in writing from the copyright holder. Authorization to copy items for internal and personal use is granted by the copyright holder for libraries and other users registered with their local Reproduction Rights Organisation (RRO), e.g. Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923, USA (www.copyright.com), provided the appropriate fee is paid directly to the RRO. This consent does not extend to other kinds of copying such as copying for general distribution, for advertising or promotional purposes, for creating new collective works or for resale. Special requests should be addressed to: publications@agu.org.

Disclaimer. The Publisher, American Geophysical Union, and Editors cannot be held responsible for errors or any consequences arising from the use of information contained in this journal; the views and opinions expressed do not necessarily reflect those of the Publisher, American Geophysical Union, and Editors, neither does the publication of advertisements constitute any endorsement by the Publisher, American Geophysical Union, and Editors of the products advertised.

Individual Subscriptions. Member subscriptions are available through members.agu.org or by contacting the AGU Member Service Center. The Service Center is open from 8:00 a.m. to 6:00 p.m. Eastern time: +1 202 462 6900, +1 800 966 2481; Fax: +1 202 328 0566; e-mail: service@agu.org. Questions about meetings or membership will be referred to the appropriate staff.

Publisher. *JGR: Space Physics* is published on behalf of the American Geophysical Union by Wiley Periodicals, Inc., 111 River St., Hoboken, NJ, 07030-5774, +1 201 748 6000.

Journal Customer Services. For institutional subscription information, claims and any enquiry concerning your journal subscription please go to www.wileycustomerhelp.com/ask or contact your nearest office.

Americas: Email: cs-journals@wiley.com; Tel: +1 781 388 8598 or +1 800 835 6770 (toll free in the USA & Canada).
Europe, Middle East and Africa: Email: cs-journals@wiley.com; Tel: +44 (0) 1865 778315.
Asia Pacific: Email: cs-journals@wiley.com; Tel: +65 6511 8000.
Japan: For Japanese speaking support, Email: cs-japan@wiley.com; Tel: +65 6511 8010 or Tel (toll-free): 005 316 50 480.

Visit our Online Customer Help available in 7 languages at www.wileycustomerhelp.com/ask.

Production Editor. For assistance with post-acceptance articles and other production issues please contact JGRAprod@wiley.com.

Access to this journal is available free online within institutions in the developing world through the AGORA initiative with the FAO, the HINARI initiative with the WHO, the OARE initiative with UNEP, and the ARDI initiative with WIPO. For information, visit www.aginternetwork.org, www.who.int/hinari/en, www.oaresciences.org, or www.wipo.int/ardi/en.

ISSN 2169-9402 (Online)

View this journal online at http://jgr-spacephysics.agu.org.

Cover: Vertical total electron content (VTEC, surface plot) as a function of latitude and local time and equatorial electrojet strength (EEJ, pink lines) for two selected days, showing the relationship of the EEJ to the equatorial ionization anomaly. See *Venkatesh et al.* [pp. 9117-9131; doi: 10.1002/2015JA021307] for more details.

Solar and Heliospheric Physics

8177 *Štěpán Štverák, Pavel M. Trávníček, and Petr Hellinger*
Electron energetics in the expanding solar wind via Helios observations (doi 10.1002/2015JA021368)

8194 *Yu. L. Sasunov, V. S. Semenov, M. F. Heyn, N. V. Erkaev, I. V. Kubyshkin, K. Yu. Slivka, D. B. Korovinskiy, and M. L. Khodachenko*
A statistical survey of reconnection exhausts in the solar wind based on the Riemannian decay of current sheets (doi 10.1002/2015JA021504)

8210 *Roman A. Kislov, Olga V. Khabarova, and Helmi V. Malova*
A new stationary analytical model of the heliospheric current sheet and the plasma sheet* (doi 10.1002/2015JA021294)

***This article is part of a Special Section– Variability of the Sun and Its Terrestrial Impact VarSITI**

8229 *H. S. Ahluwalia, R. C. Ygbuhay, R. Modzelewska, L. I. Dorman, and M. V. Alania*
Cosmic ray heliospheric transport study with neutron monitor data (doi 10.1002/2015JA021603)

8247 *William C. Feldman, David J. Lawrence, W. Thomas Vestrand, Daniel N. Baker, Patrick N. Peplowski, and Douglas J. Rodgers*
Long-duration neutron production by nonflaring transients in the solar corona (doi 10.1002/2015JA021042)

8267 *Devrie S. Intriligator, Wei Sun, Murray Dryer, James Intriligator, Charles Deehr, Thomas Detman, and William R. Webber*
Did the July 2012 solar events cause a "tsunami" throughout the heliosphere, heliosheath, and into the interstellar medium?* (doi 10.1002/2015JA021406)

***This article is part of a Special Section– Variability of the Sun and Its Terrestrial Impact VarSITI**

8281 *M. Neugebauer and J. Giacalone*
Energetic particles, tangential discontinuities, and solar flux tubes (doi 10.1002/2015JA021632)

8288 *L. Holappa and K. Mursula*
Toward more reliable long-term indices of geomagnetic activity: Correcting a new inhomogeneity problem in early geomagnetic data* (doi 10.1002/2015JA021752)

***This article is part of a Special Section– Variability of the Sun and Its Terrestrial Impact VarSITI**

8298 *A. A. Krivolutsky, L. A. Cherepanova, and A. V. Dement'eva*
Solar cycle influence on troposphere and middle atmosphere via ozone layer in the presence of planetary waves: Simulation with ARM* (doi 10.1002/2015JA021363)

***This article is part of a Special Section– Variability of the Sun and Its Terrestrial Impact VarSITI**

Magnetospheric Physics

8307 *M. W. Dunlop, Y.-Y. Yang, J.-Y. Yang, H. Lühr, C. Shen, N. Olsen, P. Ritter, Q.-H. Zhang, J.-B. Cao, H.-S. Fu, and R. Haagmans*
Multispacecraft current estimates at swarm (doi 10.1002/2015JA021707)

8317 *Suping Duan, Lei Dai, Chi Wang, A. T. Y. Lui, Zhenxing Liu, Zhaohai He, Yongcun Zhang, I. Dandouras, and H. Reme*
Cluster observations of unusually high concentration of energetic O^+ carried by flux ropes in the nightside high-latitude magnetosheath during a storm initial phase (doi 10.1002/2015JA021306)

8327 *Chen Zhou, Wen Li, Richard M. Thorne, Jacob Bortnik, Qianli Ma, Xin An, Xiao-jia Zhang, Vassilis Angelopoulos, Binbin Ni, Xudong Gu, Song Fu, and Zhengyu Zhao*
Excitation of dayside chorus waves due to magnetic field line compression in response to interplanetary shocks (doi 10.1002/2015JA021530)

8339 *R. S. Selesnick*
Measurement of inner radiation belt electrons with kinetic energy above 1 MeV (doi 10.1002/2015JA021387)

8350 *Tetsuo Motoba, Kazue Takahashi, Juan V. Rodriguez, and Christopher T. Russell*
Giant pulsations on the afternoonside: Geostationary satellite and ground observations (doi 10.1002/2015JA021592)

8368 *D. Cai, A. Esmaeili, B. Lembège, and K-I Nishikawa*
Cusp dynamics under northward IMF using three-dimensional global particle-in-cell simulations (doi 10.1002/2015JA021230)

8387 *Elisabet Liljeblad, Tomas Karlsson, Jim M. Raines, James A. Slavin, Anita Kullen, T. Sundberg, and Thomas H. Zurbuchen*
MESSENGER observations of the dayside low-latitude boundary layer in Mercury's magnetosphere (doi 10.1002/2015JA021662)

8401 *N. A. Tsyganenko and V. A. Andreeva*
A forecasting model of the magnetosphere driven by an optimal solar wind coupling function (doi 10.1002/2015JA021641)

8426 *Hajime Sugiyama, Satyavir Singh, Yoshiharu Omura, Masafumi Shoji, David Nunn, and Danny Summers*
Electromagnetic ion cyclotron waves in the Earth's magnetosphere with a kappa-Maxwellian particle distribution* (doi 10.1002/2015JA021346)

***This article is part of a Special Section– Origins and Properties of Kappa Distributions**

8440 *J. D. Li, M. Spasojevic, and U. S. Inan*
Predicting conditions for the reception of one-hop signals from the Siple transmitter experiment using the *Kp* index (doi 10.1002/2015JA021547)

8448 *Kyungguk Min and Kaijun Liu*
Regime transition of ion Bernstein instability driven by ion shell velocity distributions (doi 10.1002/2015JA021514)

8455 *Claudia Martinez-Calderon, Kazuo Shiokawa, Yoshizumi Miyoshi, Mitsunori Ozaki, Ian Schofield, and Martin Connors*
Statistical study of ELF/VLF emissions at subauroral latitudes in Athabasca, Canada (doi 10.1002/2015JA021347)

8470 *Romina Nikoukar, Gary Bust, and David Murr*
A novel data assimilation technique for the plasmasphere (doi 10.1002/2015JA021455)

8486 *Yan Wang, Jiannan Tu, and Paul Song*
A new dynamic fluid-kinetic model for plasma transport within the plasmasphere (doi 10.1002/2015JA021345)

8503 *N. M. E. Kalmoni, I. J. Rae, C. E. J. Watt, K. R. Murphy, C. Forsyth, and C. J. Owen*
Statistical characterization of the growth and spatial scales of the substorm onset arc (doi 10.1002/2015JA021470)

8517 *E. Chané, J. Raeder, J. Saur, F. M. Neubauer, K. M. Maynard, and S. Poedts*
Simulations of the Earth's magnetosphere embedded in sub-Alfvénic solar wind on 24 and 25 May 2002 (doi 10.1002/2015JA021515)

8529 *Suk-Bin Kang, Kyoung-Wook Min, Mei-Ching Fok, Junga Hwang, and Cheong-Rim Choi*
Estimation of pitch angle diffusion rates and precipitation time scales of electrons due to EMIC waves in a realistic field model* (doi 10.1002/2014JA020644)

***This article is part of a Special Section– Low-Frequency Waves in Space Plasmas**

8547 *W.-L. Teh, T. K. M. Nakamura, R. Nakamura, W. Baumjohann, and M. Abdullah*
On the evolution of a magnetic flux rope: Two-dimensional MHD simulation results (doi 10.1002/2015JA021619)

8559 *Daniel J. Gershman, Jim M. Raines, James A. Slavin, Thomas H. Zurbuchen, Brian J. Anderson, Haje Korth, George C. Ho, Scott A. Boardsen, Timothy A. Cassidy, Brian M. Walsh, and Sean C. Solomon*
MESSENGER observations of solar energetic electrons within Mercury's magnetosphere (doi 10.1002/2015JA021610)

8572 *Asif Shah, C. L. Waters, M. D. Sciffer, F. W. Menk, and R. L. Lysak*
Effect of the ionosphere on the interaction between ULF waves and radiation belt electrons (doi 10.1002/2015JA021379)

8586 *P. Kollmann, E. Roussos, A. Kotova, J. F. Cooper, D. G. Mitchell, N. Krupp, and C. Paranicas*
MeV proton flux predictions near Saturn's D ring (doi 10.1002/2015JA021621)

8603 *C. C. Chaston, J. W. Bonnell, C. A. Kletzing, G. B. Hospodarsky, J. R. Wygant, and C. W. Smith*
Broadband low-frequency electromagnetic waves in the inner magnetosphere (doi 10.1002/2015JA021690)

8616 *I. Y. Vasko, O. V. Agapitov, F. S. Mozer, and A. V. Artemyev*
Thermal electron acceleration by electric field spikes in the outer radiation belt: Generation of field-aligned pitch angle distributions (doi 10.1002/2015JA021644)

8633 *A. Radioti, D. Grodent, J.-C. Gérard, E. Roussos, D. Mitchell, B. Bonfond, and W. Pryor*
Auroral spirals at Saturn (doi 10.1002/2015JA021442)

8644 *M. Hamrin, L. Andersson, A. Vaivads, T. Pitkänen, and H. Gunell*
The use of the power density for identifying reconnection regions (doi 10.1002/2015JA021535)

8663 *I. Y. Vasko, A. A. Petrukovich, A. V. Artemyev, R. Nakamura, and L. M. Zelenyi*
Earth's distant magnetotail current sheet near and beyond lunar orbit (doi 10.1002/2015JA021633)

8681 *M. de Soria-Santacruz, W. Li, R. M. Thorne, Q. Ma, J. Bortnik, B. Ni, C. A. Kletzing, W. S. Kurth, and G. B. Hospodarsky*
Analysis of plasmaspheric hiss wave amplitudes inferred from low-altitude POES electron data: Validation with conjunctive Van Allen Probes observations* (doi 10.1002/2015JA021148)

***This article is part of a Special Section– New perspectives on Earth's radiation belt regions from the prime mission of the Van Allen Probes**

8692 *Xiaoyan Xing, Chih-Ping Wang, Jun Liang, and Larry R. Lyons*
Plasma sheet Pi2 pulsations associated with bursty bulk flows
(doi 10.1002/2015JA021668)

8707 *T. Motoba, S. Ohtani, B. J. Anderson, H. Korth, D. Mitchell, L. J. Lanzerotti, K. Shiokawa, M. Connors, C. A. Kletzing, and G. D. Reeves*
On the formation and origin of substorm growth phase/onset auroral arcs inferred from conjugate space-ground observations (doi 10.1002/2015JA021676)

8723 *K. Garcia-Sage, T. E. Moore, A. Pembroke, V. G. Merkin, and W. J. Hughes*
Modeling the effects of ionospheric oxygen outflow on bursty magnetotail flows (doi 10.1002/2015JA021228)

8738 *J.-C. Zhang, L. M. Kistler, H. E. Spence, R. A. Wolf, G. Reeves, R. Skoug, H. Funsten, B. A. Larsen, J. T. Niehof, E. A. MacDonald, R. Friedel, C. P. Ferradas, and H. Luo*
"Trunk-like" heavy ion structures observed by the Van Allen Probes (doi 10.1002/2015JA021822)

8749 *A. N. Jaynes, M. R. Lessard, K. Takahashi, A. F. Ali, D. M. Malaspina, R. G. Michell, E. L. Spanswick, D. N. Baker, J. B. Blake, C. Cully, E. F. Donovan, C. A. Kletzing, G. D. Reeves, M. Samara, H. E. Spence, and J. R. Wygant*
Correlated Pc4–5 ULF waves, whistler-mode chorus, and pulsating aurora observed by the Van Allen Probes and ground-based systems* (doi 10.1002/2015JA021380)

***This article is part of a Special Section– Pulsating Aurora and Related Magnetospheric Phenomena**

8762 *Tsugunobu Nagai, Iku Shinohara, and Seiji Zenitani*
The dawn-dusk length of the X line in the near-Earth magnetotail: Geotail survey in 1994–2014
(doi 10.1002/2015JA021606)
